

Alert Plan & Alert

Your first-aid in a disaster

Benefits:

- ***Fast and affordable***
- ***User-friendly***
- ***Always available***
- ***Wide reach***

What should you do in case of a disaster? Inform your employees and contacts with the greatest possible speed. And become operational again as fast as you can. So having a disaster plan and an information system are essential. In fact, you've probably arranged something already. But are you sure it will work the way you want? With IBM's web-based applications Alert Plan and Alert, the answer is a simple "yes".

Get operational again fast with Alert Plan

A disaster plan is essential for the continuity of your business. Alert Plan is a handy tool for setting up a detailed disaster plan. It helps you to identify important business information and consider the various emergency scenarios. So in case of a disaster you know exactly how to get operational again fast.

No time wasted with Alert

In case of a disaster, an effective information system is crucial. After all, you want to tell employees and contacts what's going on as quickly as possible. Phoning around with a list of telephone numbers is not really an option. It's time-consuming and inefficient. Alert provides a smooth-running system that allows you to contact everyone you need in only a few minutes.

Optimum reach

When sending a disaster report, speed alone is not enough. You want to be sure that your message will actually be read or listened to. Alert makes sure it is. Simply use Alert to send a message to your contact persons via e-mail, telephone, text message or other communications medium. Exactly as you indicated,

without missing out any essential information. The application will do the rest: it keeps an exact account of which recipients have actually read or listened to your message.

Easy to use

There are too many complicated tools. Alert and Alert Plan are easy to use. It's easy to enter information, and it's just as easy to use them in the event of a disaster. In Alert, importing messages and creating contact groups is a simple step-by-step procedure. As too is describing emergency situations and identifying licences in Alert Plan.

And if a disaster does happen? Both applications are just as user-friendly. With one click of the button, Alert reaches all the contacts that you want to inform. And Alert Plan tells you exactly what to do. So making optimum use of these handy tools couldn't be easier.

Accessible everywhere at any time

Whether you're at the office or abroad, wherever you are you want to be able to use your information system and your disaster plan as soon as necessary. With Alert and Alert Plan, you're sure of this. All you need is Internet access. You will then have access to all your essential information such as licences informa-

tion and the location of your back-up tapes at any time from any location.

An affordable solution

Like to know the exact financial commitment? Without being surprised by extra costs later? That's no problem at all. With Alert and Alert Plan, IBM provides affordable solutions without any unforeseen additional costs. And that means no extra investments in hardware and software but simply an inexpensive solution designed especially for you.

Professional support included

With IBM you always benefit from extensive knowledge and experience. That's also the case when you opt for Alert and Alert Plan. Both applications include support by an IBM consultant. This means that IBM not only guides you through implementing the applications but also by entering data. With Alert and Alert Plan, you get a total solution at an affordable price.

Benefit from the many advantages of IBM's Alert and Alert Plan:

- No extra investments in hardware and software
- Access to a detailed disaster plan
- A smooth-running information system
- Remote access
- Use of multiple communications media
