

*Join us on December 8, 2009 for the CSI Virtual University*

We invite you to join us for our first CSI Virtual event to learn how IBM hardware and software technologies are helping to build a smarter planet. The event is designed to present technical IT topics to demonstrate how you can utilize IBM products to reduce IT costs and provide innovative solutions for our mutual clients.

The CSI Virtual University will launch on **December 8, 2009** with a "Live Day" from 10:00am ET to 6:00pm ET. Take advantage of this virtual venue to learn more about IBM technologies without ever leaving your office. You can attend our Main Tent sessions which include; IBM's Building a Smarter Planet, Dynamic Infrastructure, Cloud Computing, and a Technology Outlook session, and then ask live on-line questions of our speakers and subject matter experts.

The breakout sessions feature six high interest technical themes that focus on how IT can help your client run their business more productively and efficiently: business resiliency, cloud computing, green and beyond, information infrastructure, virtualization and consolidation and application solutions.

***To Registration for the event:***

Click on the URL below:

Complete the short registration form

While our launch is one day, the virtual university will be available on demand for one year with new technical sessions added through out 2010!

***We look forward to your participation in the  
CSI Virtual University!***
