

## ManinSoft leverages IBM Innovation Center in Korea to support WebSphere and DB2 and expand their markets

Maninsoft is a software company established in 2006, as a subsidiary of Miracom's e-business operations. They specialize in providing various applications for Business Process Management (BPM) to streamline internal and external operations. They provide solutions that can efficiently manage and optimize desired business changes management methodologies for various organizations.

ManinSoft's main BPM solution is called, "Highway101 BPM Suite," which includes solutions for Business Activity Monitoring (BAM), and Process Assets Library (PAL). This solution provides an entire company's operational process so that it can efficiently manage and optimize support for international standards in BPMN, BPEL, SOAP, WSDL, XML and Schema.

The Highway101 BPM Suite is a J2EE based open architecture application and each component uses SOA mutual linkage and structural development. By conforming to the standards of the J2EE platform, the application is a stable environment and provides scalability by using IBM's WebSphere Application Server.

Maninsoft used the IBM® Innovation Center in Seoul, to test the above suite of products using WebSphere® Application Server Version 6.1 and System p hardware on AIX® server operating system. The team at the Innovation Centre provided Maninsoft with hands-on enablement assistance, education sessions, proof-of-concept and migration support for the solution to be deployed on IBM technology.

Mr. SungDo Choi, Chief Researcher & Developer at Maninsoft for Highway 101 states "When we compare our products to our competition, we are able to offer diverse capability adapters in the Service Oriented Architecture (SOA) framework which enables clients to consider our products favorably.

Mr. Choi was particularly impressed with the team at the IBM Innovation Center. "I was astonished by the very passionate attitude of the IBM Innovation Center team, and I would like to strengthen the relationship with IBM by working closely with the centre for our future projects."
