

Mastersoft use the IBM Innovation Centre to double their application performance on System p and AIX

Founded in 1989, Mastersoft Systems is a leading provider of information management solutions to major organisations in Australia and New Zealand. Headquartered in Sydney, Australia, Mastersoft delivers a broad spectrum of solutions across the key areas of Information Quality Management, Open Information Architectures, Customer Data Integration Solutions and Customer Communications Management.

Mastersoft used the IBM® Innovation Centre for Business Partners in Sydney to test their product Harmony on IBM System p hardware using AIX® operating system.

Gayatri Dhawan, Manager for Product Support at Mastersoft, says "Within a limited 2-week engagement at the IBM Innovation Centre, Mastersoft was able to successfully fine tune the batch performance of Harmony. Our Java based data quality product was able to achieve over 200% increase in throughput after the 2-week engagement."

Harmony has been tested on various System p models and found to be performing at the required level based on the configuration provided.

Adrian Anderson, Mastersoft Solution Consultant says "The improvement in the overall performance of Harmony in the AIX environment could not have been achieved without the expert knowledge and support of the IBM Innovation Centre staff who were always responsive and accommodating to our varied requirements."

Gayatri also states "Without access to the resources of the centre, it would have been impossible to achieve the outcome given the tight timeframes and limited AIX skills in Mastersoft. The 24-hour access via the virtual private network (VPN) gave us the required flexibility to conduct tests remotely while fitting in with our work schedule. Mastersoft looks forward to continue working with the IBM Innovation Centre to both explore IBM's capabilities and to improve our products in times to come".
