

Wonder cooperates with IBM Innovation Center to successfully implement e-Government project

Shanghai Wonder Information Tech Co. Ltd. (Wonder) is a leading software provider of content management solutions in China. It develops industry-specific solutions for government, media and enterprise and has been elected by 'China Internet Weekly' as one of the 100 best e-Government solution providers in China for three consecutive years. Since its establishment in 1998, Wonder has enjoyed a good relationship with IBM®.

In 2004, Wonder won the project to build an internal data exchange platform for the e-Government project for the JiangShu province. After careful comparison of different products, Wonder chose IBM WebSphere® Business Integration Message Broker to build the data exchange center and IBM WebSphere MQ to build the data exchange node, making this the first implementation of an IBM WebSphere Business Integration solution in East China.

Throughout the project, the IBM Innovation Center worked closely with Wonder. The center provided technical training on IBM products and advised Wonder on solution architecture design. Wonder also used IBM Innovation Center resources to test its solution with the support of the IBM technical consultants.

Wonder's solution for the project was to be deployed in a high availability (HA) environment. Wonder had no previous experience on HA and encountered some deployment problems when they tried to install WebSphere Business Integration Message Broker on two IBM eServer pSeries® 630. As the project was on a tight schedule, it was critical for the Wonder to resolve the problems quickly and they turned to IBM Innovation Center for help. An IBM technical consultant visited the customer site with Wonder and worked nonstop for several days until all the technical issues were resolved. The solution was then successfully deployed.

Following the success of this project, Wonder's solution, based on IBM WebSphere Business Integration Message Broker is being promoted for other e-Government projects.

Mr. Ji Hao, Wonder's Vice President comments "We are very satisfied with the great support from the IBM Innovation Center. Your professionalism and superb technical skills deeply impress us. We look forward to even more fruitful cooperation."
