JA355CE	Introduction to Java SE 5 using Eclipse 3.2	5 Days	C/H	\$3,600
WD241CE	Introduction to Programming XML and Related Technologies with Java 1.4	5 Days	C/H	\$3,500
VD241CE	Introduction to Programming XML and Related Technologies with Java 1.4	5 Days	ILO	\$3,500

C/H = Classroom with Hands-on Labs ILO = Instructor-led Online Class

Curriculum Overview

This curriculum gets you on the launch pad for developing dynamic applications with technologies like Java, XML and Web services. It includes core prerequisite courses for curricula such as WebSphere Application Server as well as advanced training for application design and integration.

Our courses are currently organized into the following five (5) skill-building areas:

Java

Java is the industry standard for developing Web applications. No matter what your background or what platform you use, we have a course to help you develop Java applications or prepare for developer certification from IBM.

Object Technology

A strong understanding of Object Technology is a must for application developers with today's programming languages and technologies. Our portfolio includes training in Object Technology concepts, analysis, design, methodologies, and architecture.

Eclipse

The open-source Eclipse Platform is designed for building integrated development environments. Our curriculum helps you build Object Technology and Java skills, using the Eclipse Platform as the development environment.

Web Services

Web Services is a key component of a service-oriented architecture (SOA), allowing you to integrate diverse applications with a dynamic set of reusable business services. With our curriculum, you can learn how to build service-oriented architectures using the latest Web Services standards.

XML

Knowledge of XML is essential for understanding J2EE, Web Services and more. Our curriculum helps you design, develop and deploy robust, multi-tier applications using XML with the latest implemented standards.

Your IT Infrastructure is Up to Speed, But What About Your Skills?

IBM Training helps shorten the learning curve on all our technologies with top instructors, world-class training facilities and an insider's perspective. Get real-world knowledge in a format that suits your needs – onsite classrooms, custom curricula, hands-on labs and more. View our brief video clip, "A Day in the Life of a Student" to learn what IBM Training can do for you at ibm.com/software/partners/education_centers/videos/day_life_student.wmv

It's Smarter for Companies to Train Than to Recruit

Increased competition for the best workers is causing CEOs to focus on talent development and management as a top priority in 2008. One of the best ways for companies to keep skilled IT employees is to provide them with training opportunities. Read more about this issue in Winning the Battle for Talent at ibm.com/training/us/talent

2008 IBM Technical Conferences Schedule

IBM technical conference attendees tell us that they get what they need at these events. Return to work with new techniques you can apply immediately. See page 6, then enroll today at ibm.com/training/conf

No Travel Budget? No Problem. Train Without Traveling.

Travel budgets zeroed out in your company? No problem. You can still build the skills you need for 2008 and eliminate travel expense with WebSphere Education's instructor-led online (ILO) learning. Just like their classroom counterparts, ILO classes offer live instruction, hands-on labs, and interaction with your instructor and classmates. With speakers, microphone, or a headset, you become part of a virtual classroom where you interact with the instructor just like you would in a conventional classroom setting.

Experience the ILO learning environment by viewing the ILO demo. Visit ibm.com/training/us/ilo

Visit the New WebSphere Education Web Site

With over 250 courses across the WebSphere software portfolio and SOA, the new WebSphere Education Web site provides an invaluable resource to plan your training to build in-demand skills for deploying WebSphere and SOA. The new WebSphere Education Web site makes it easy to navigate through the WebSphere and SOA curriculum and find the worldwide availability of courses in three clicks or less. Need help planning your training? The WebSphere Education Web site features over 30 training paths with suggested course sequences. Additionally, the Web site offers links to over 30 no-charge, self-study courses and IBM Redbooks and other resources that help you prepare for your WebSphere class or IBM WebSphere Certification. To stay up-to-date with new WebSphere Education offerings, visit the new Web site and subscribe to the WebSphere Education New Course RSS feed. Bookmark the WebSphere Education Web site at ibm.com/websphere/education
